

MOHIT REDDY

San Jose, CA 95113 | +1 408 210 6386 | mintureddy1302@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Software Engineer building full-stack applications and scalable backend services using **Java/Spring Boot**, **React**, and **AWS**. Strong foundations in **data structures**, **algorithms**, and **distributed systems**, with hands-on experience in **REST APIs**, **PostgreSQL/MongoDB**, **CI/CD**, and container orchestration using **Docker** and **Kubernetes**.

EDUCATION

San Jose State University

San Jose, CA

Master of Science in Software Engineering – GPA: 3.8

Aug 2025 – May 2027 (Expected)

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Distributed Systems, Software Systems Engineering, Enterprise Software Platforms, Data Mining, Generative AI, Software Security Technologies

CVR College of Engineering

Hyderabad, India

Bachelor of Technology in Computer Science – GPA: 3.6

Nov 2021 – Apr 2025

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, C++, C, Bash

Backend & Distributed Systems: Spring Boot, Microservices, REST APIs, Apache Kafka, GraphQL, JUnit, Mockito, Node.js

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM, CloudWatch), Docker, Kubernetes, CI/CD Pipelines, Git, GitHub

Frontend: React.js, HTML/CSS, Bootstrap

EXPERIENCE

AppStance – Apple Ads AI Platform

May 2026 – Present

Software Engineer

- Reduced initial render time of the keyword performance dashboard from **3.2s** to **2.2s (30% faster)** by implementing component-level code splitting and lazy loading using **React.lazy** and **Suspense** in **React**.
- Built an automated data archival pipeline using **AWS Lambda (Python)** and **Amazon S3** to store daily keyword-level performance data, including spend, taps, and bids, retrieved from the **Apple Ads API** and scheduled via **AWS EventBridge**, reducing manual data export and backup work.
- Contributed to a webhook handler using **Spring Boot (Java)** to ingest real-time Apple Ads campaign status updates into **PostgreSQL**, reducing dashboard data staleness from **15 minutes** to under **2 minutes** for a subset of test accounts.
- Implemented retry logic with **exponential backoff** in **Spring Boot** for failed **AppsFlyer API** calls, reducing synchronization failures in the module by an estimated **40%** during testing.
- Developed a **Python** data validation script using **pandas** to compare sampled Apple Ads keyword records against internal **PostgreSQL** entries, identifying data mismatches in approximately **3%** of the records analyzed.

Cleartrip

May 2024 – Jun 2025

Software Development Engineer

- Designed an end-to-end **Medical Flight Cancellation and Insurance Claims** feature, driving contract-first API design in **OpenAPI** and modelling cancellation, document, and claim-status collections in **MongoDB**, enabling customer self-serve cancellations and cutting manual agent effort by **40%**.
- Integrated a third-party insurance claims service via **Spring WebClient** over **OAuth2** client-credentials auth to auto-initiate claims at cancellation, removing a separate submission step and improving claim turnaround by **30%**.
- Built a **TV License checkout** flow for South African customers in **React.js** using **React Hook Form** and **Redux Toolkit** for multi-step state and inline payment, consolidating an off-site payment journey into a single checkout.
- Hardened PII exchange across both integrations with **Bean Validation**, field-level encryption, and log masking, and instrumented flows with **Micrometer**, **Prometheus**, and **Grafana** alerting to catch upstream degradation before customer impact.
- Covered both integrations with **JUnit 5**, **Mockito**, **WireMock** contract tests, and **Testcontainers MongoDB** tests, gated in **Jenkins** CI ahead of **Helm** deploys to **Kubernetes**.

PROJECTS

Spartan Exchange | React, Spring Boot, PostgreSQL, Docker, AWS, JWT

Sep 2025 – Dec 2025

- Engineered a full-stack campus marketplace using **React**, **Spring Boot**, and **PostgreSQL**, supporting secure authentication, product listings, advanced filtering (category, price, keyword), and image uploads to streamline peer-to-peer transactions.
- Designed and integrated a **real-time chat system** enabling direct buyer-seller communication tied to product listings, improving user interaction and accelerating transaction workflows.
- Containerized backend services with **Docker** and deployed on **AWS EC2**, configured **PostgreSQL** on **RDS** and media storage on **S3**, and implemented **JWT**-based authentication to ensure secure, scalable, and production-ready infrastructure.

Distributed Key-Value Store | Java, TCP Sockets, Multithreading, Concurrency

Jan 2025 – Apr 2025

- Built a distributed in-memory key-value store in **Java** using **TCP sockets** and **multithreaded** request handling to support concurrent client requests with low-latency response times.
- Implemented **cross-node data replication** and disk-based persistence to prevent data loss, enabling automatic state recovery after simulated server crashes and failure scenarios.
- Improved scalability by optimizing **thread pool** management and reducing **lock contention**, increasing throughput by **35%** on multi-core systems while maintaining consistency under parallel writes.
